Manitoba Psychological Society Inc.

Established in 1966, MPS is the fraternal organization for Registered Psychologists in Manitoba. Affiliate and student members are also actively involved. MPS promotes psychology as a science, as a profession, and as a means of promoting human welfare. The growing MPS membership of approximately 200 constitutes about 75% of Manitoba's Certified Psychologists.

Member services include continuing education, newsletter, referral network, and media opportunities. MPS is an energetic organization. Members actively advocate for psychologically sound public policy, engage in public discussion regarding human conduct, and work with government to improve access to psychological services.

Robert Krueger, Ph.D.

Developments in Mental Disorder Diagnosis: DSM-IV, DSM-V, and the **Road Ahead**

Sponsored by:

SPEAKER BIO

Robert F. Krueger, Ph.D., is a Hathaway Distinguished Professor in the Department of Psychology at the University of Minnesota. He completed his undergraduate and graduate work at the University of Wisconsin, Madison, and his clinical internship at Brown University. Professor Krueger's major interests lie at the intersection of research on personality, psychopathology, disorders of personality, psychometrics, and behavior genetics. He has received a number of awards, including the University of Minnesota McKnight Land-Grant Professorship, the American Psychological Association's Award for Early Career Contributions, and an American Psychological Foundation Mid-Career Award. He is a Fellow of the Association for Psychological Science (APS) and the American Psychopathological Association (APPA) and was inducted into the Society for Multivariate Experimental Psychology (SMEP). He is currently Editor of the Journal of Personality Disorders and is a member of the DSM-V Personality and Personality Disorder Working Group.

Developments in Mental Disorder Diagnosis: DSM-IV, DSM-V, and the Road Ahead

Description: The American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders (5th Edition; DSM-5) is slated to be published in May 2013. This workshop will provide an overview of changes from DSM-IV to DSM-5, with particular emphasis on how DSM-5 is (and is not) connected with empirical research in personality and individual differences. Working to enhance the connection between Psychiatry and individual differences research is critically important in ensuring an empirical basis for psychiatric nosology. The workshop will also focus on challenging practical issues that arise when classification systems such as the DSM are not in sync with data. For example, when a thorough assessment is completed, many if not most patients meet criteria for more than one specific DSM-defined disorder. Conceptualizing these presentations in terms of "multi-morbidity" is unlikely to prove helpful or illuminating. Rather, new ways of conceptualizing psychopathology are needed that better map the complex presentations typically encountered in clinical practice.

Learning Objectives:

- 1. Understand major aspects of the history of psychiatric classification that led to the approach taken in DSM-IV.
- 2. Understand notable changes between DSM-IV and DSM-5, such as the removal of the multi-axial system.
- 3. Understand both the DSM-IV (copied in DSM-5 Section II) and DSM-5 Section III approaches to classifying personality disorders, as well as the conceptual underpinnings of these approaches.
- 4. Understand notable limitations of the DSM paradigm, current efforts to develop more empirically-based alternatives (e.g., the NIMH RDoC initiative), and the reasons why new empirically-based approaches are needed.

Tentative Program Schedule

08:30 - Registration

09:00 - Workshop begins

10:30 - Break

12:00 - Luncheon (served on-site)

13:00 - Workshop continues

14:30 - Break

16:30 - Concluding remarks

DATE:

FRIDAY, JUNE 7, 2013

LOCATION:

DELTA WINNIPEG 350 ST. MARY AVENUE WINNIPEG, MB
