Managing herbicide resistant Foxtail (*Setaria*) species at the Ian N. Morrison Research Farm

Green and yellow foxtail populations at Carman have developed resistance to a wide range of herbicides and this is making management of these weeds very difficult. This workshop will focus on alternative weed management options using herbicides, as well as mechanical and cultural control measures.

When: December 11, 2018
930 AM – Coffee and refreshments
10 AM to 12 Noon – Presentations and discussion

Where: Room 218, Plant Science Department

Who: All Plant and Soil Science technical staff working at Carman
All graduate students who work with herbicides at Carman
Interested Faculty, staff and graduate students

Presentations

- Alvin Iverson, Scope of the problem at Carman Research Farm
- Rob Gulden, Plant Science, Biology of foxtail
- Tammy Jones, Manitoba Agriculture, Planning rotations for herbicide resistant foxtail
- Jeanette Gaultier, Industry, Chemical options for foxtail management
- Keith Bamford, Plant Science, Managing foxtail organically
