The Perils of Predatory Journals

November 22nd, 2017 – Online – Register at: http://bit.ly/2AmjUfj
11:00 am – Noon

Predatory journals are the fake news of the medical literature, publishing false or sub-par research for a fee. They've become more prevalent in recent years, and researchers and clinicians must be on guard to avoid using or publishing in them. In this session, you will learn about the nature of predatory journals, how they're affecting the medical literature, and how to identify and avoid them. In this session, we will also address fake news more generally, and teach you how to distinguish between genuine and fake news stories.
