Aging Imageomics Study: Looking at imaging, seeing health

DATE **NOV 29TH , 2018**
TIME **12 PM - NOON**
LOCATION **UNIV MANITOBA-HEALTH SCI CTR., GG147**

ABSTRACT

This talk a two-fold goal of presenting an observational population study in adult subjects 50 years of age or older in the province of Girona (Spain) to develop advanced imaging biomarkers based on whole-body magnetic resonance imaging (MRI) associated with aging and its relation with biopsychosocial, metabolomics, lipidomics and microbiomics characteristics, and updating the MRI-population based studies context worldwide.
