

A new portable thresher. Based on the instruction of the manufacturer, it is suitable for wheat, soybean, canola, rice. Here are the machine parameters: power: 3KW; weight: 62 kg; volts: 220V; rotational speed: 2800 rpm; Rotor size: 38 cm; material intake dimension: 40x17 cm; overall dimension: 130x53x100 cm (Length x width x height); adjustable airflow intake; transportation wheels, etc.

I ordered it from China for my own farm. But I never used it. It is still in the original package sitting in my garage. The package dimension is 21x35x46 inch, plus the motor in a box (13x14x15 inch).

I paid around \$2000, including the machine itself and the shipping.

Sell for \$1000.
